SUMMARY

Full-Stack Software Engineer with strong experience building scalable web and AI-powered applications using React.js, FastAPI, Node.js, PostgreSQL, MongoDB, and Docker. Experienced in REST APIs, authentication systems, cloud deployment, vector databases, RAG pipelines, semantic search, and production-grade backend architecture.

EXPERIENCE

Cur8r Technologies Jul 2026 – Present
Software Engineer Intern Remote

- Developed full-stack features for an AI-powered procurement intelligence platform using React, FastAPI, PostgreSQL, SQLAlchemy, and Alembic.
- Identified a critical document-processing gap where only the first 8 pages of tender PDFs were embedded for Discover scoring; built a backfill pipeline to parse and embed complete PDFs, improving the accuracy of tender suitability scores.
- Independently developed competitor intelligence capabilities by scraping historical tender participation data across government procurement portals, including winners, unsuccessful bidders, and bid amounts, and building workflows to identify and rank relevant competitors using LLM-based analysis.
- Built web scrapers and data ingestion workflows for multiple government procurement portals, expanding the breadth of tender data available on the Discover platform while researching additional portals and data sources for product expansion.
- Implemented database models, migrations, repository layers, REST APIs, document-processing workflows, and production features while collaborating through Git, pull requests, code reviews, and technical design documents.

EDUCATION

Indian Institute of Technology Roorkee 2020 – 2024
Bachelor of Technology Roorkee, India

PROJECTS

OpsPilot AI | GitHub

- Built an AI-powered observability platform that analyzes logs, tickets, and internal docs to detect incidents and answer operational queries using LLMs.
- Engineered an end-to-end RAG pipeline with ingestion, chunking, embeddings, and vector retrieval using PostgreSQL (pgvector).
- Implemented context-grounded Q&A with source citations for reliable AI responses.
- Developed async workers for scalable ingestion, embedding generation, and background processing.
- Built SaaS-grade backend systems with JWT auth, RBAC, and multi-tenant data isolation.
- Containerized and deployed services using Docker and cloud platforms.

PersonalDrive | GitHub

- Built a secure cloud storage platform for uploading, managing, and accessing files with fine-grained permissions.
- Implemented intelligent document retrieval and query-based answering for PDFs and text documents.
- Enabled collaboration through shared workspaces and group-based access control.
- Built backend services for metadata management, permissions, and scalable storage workflows.

NarrativeNode | GitHub

- Built a responsive blogging platform with JWT authentication and role-based access control.
- Implemented post lifecycle workflows including drafts, tags, likes, comments, and moderation actions.
- Added search, pagination, and author profiles to improve content discovery.

- Designed modern frontend UI using Tailwind CSS with dark mode and skeleton loaders.

VidTube | GitHub

- Architected a scalable video hosting backend using Node.js, Express.js, and MongoDB.
- Implemented JWT authentication with access/refresh tokens and bcrypt password hashing.
- Built video upload and media workflows using Multer and Cloudinary.
- Designed MongoDB schemas and aggregation pipelines for subscriptions, feeds, and engagement metrics.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, C++, SQL
Frontend: React.js, HTML5, CSS3, Tailwind CSS, Redux, Axios, React Query
Backend: FastAPI, Node.js, Express.js, Django, SQLAlchemy, Alembic, REST APIs, JWT, OAuth
Databases: PostgreSQL, MongoDB, Redis, pgvector
AI / ML: LLMs, RAG Pipelines, Embeddings, Vector Search
DevOps / Cloud: Docker, GCP, AWS, Git, GitHub, Vercel, Railway, Render
Practices: Data Structures, Algorithms, System Design, CI/CD, Agile, TDD
